

TRAVERSING AND WORK POSITIONING TOOL

CAPTAIN

An innovative tool catering for modern work techniques. Carefully designed to add stability and work positioning options during technical jobs.

General Information

The Captain is a self-locating, high strength hook that has been designed and tested with the trademark attention to detail that DMM is so well known for.

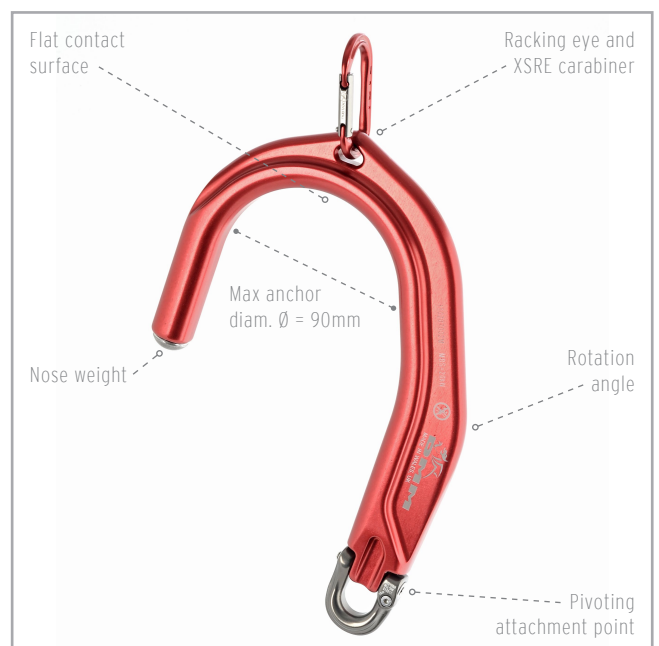

The pivoting D-Shackle removes torsional friction and interacts beautifully with the carefully sculpted hook form to ensure reliable location on any anchor, specifically for connecting to remote anchors to facilitate controlled sideways movement - traversing. Once in place, the quality engineering ensures a rated strength of 18kN (dependent on the anchor quality).

When the job is done, the Captain racks superbly on a harness, minimising the chances of snagging.

Perfect for working between or within the canopy...

Features

- > Self-righting/locating
- > High strength 18kN
- > Snag-free rackability
- > Customisable nose weighting
- > Textile compatible hot forged connecting D Shackle

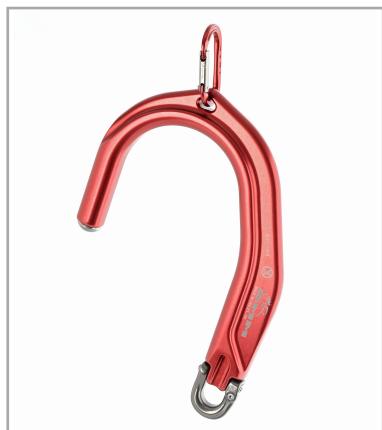

Technical Specifications

- > Rating: **18kN**
- > Max anchor diameter: **90mm**
- > Bark friendly hook design
- > 100% CNC machined hook body
- > Hot forged shackle attachment point
- > Patent pending

Available as:

Captain

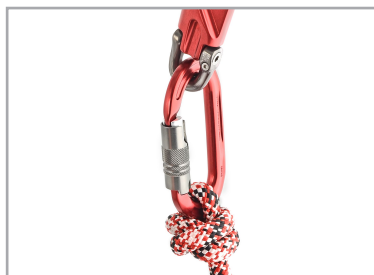

(with D Shackle and XSRE carabiner)

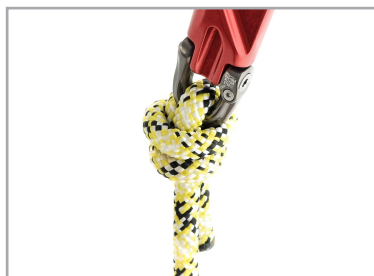

Captain Kit

(Captain, D Shackle, XSRE, 15m 10mm Sirius Cord, DMM 6L Tool Bag)

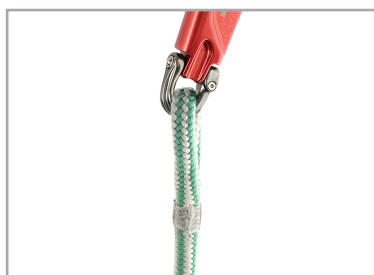

Attachment Methods

Carabiner

Knot

Splice
